How to Give The Extra Time

0. General Principles

0.1 General Calculation Principle

The duration of extra time should reflect the actual period during which the participant was unable to work because of the issue.
All durations should be calculated in minutes.

```
Extra_Time = Issue_Resolution_Time - Issue Opening Time
```

Where two reasonable estimates are available, the shorter duration will be used unless the Jury determines that there is clear evidence supporting a different duration.

0.2 Complete Volunteer Record

(1) When both the volunteer-recorded OPEN and CLOSE times are available:

```
Extra_Time_Volunteer = CLOSE_Volunteer - OPEN_Volunteer
```

This will normally be the recorded duration of the issue.
(2) ⚠️ However, where the closing time may have been entered late, or the participant indicates that the issue was resolved earlier, the participant will be asked to provide the time at which they recall being able to resume work:

```
Extra_Time_Participant = CLOSE_Participant - OPEN_Volunteer
```

(3) The final extra time will be:

```
Final Extra Time = Min (Extra_Time_Volunteer, Extra_Time_Participant)
```

0.3 Missing Opening or Closing Time

(1) Missing Closing Time:

```
Extra_Time = Recalled CLOSE_Participant - Recorded OPEN
```

(2) Missing Opening Time:

```
Extra_Time = Recorded CLOSE - Recalled OPEN_Participant
```

(3) Missing Opening and Closing Time:

```
Extra_Time = Recalled CLOSE_Participant - Recalled OPEN_Participant
```

The Jury may review other available evidence, such as system logs, platform timestamps, messages, or records from nearby volunteers, before confirming the extra time.

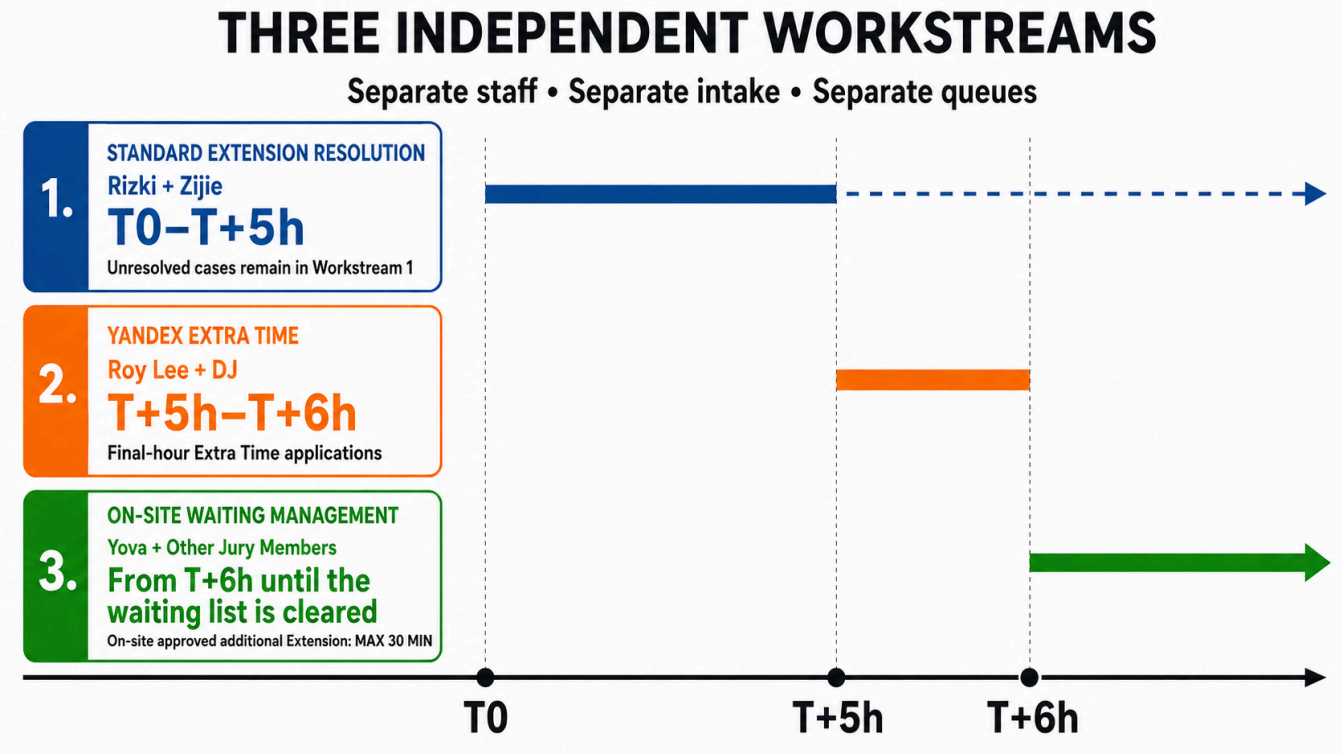

1. Operating Model

The technical-delay process is divided into three independent workstreams. Each workstream has its own staff, intake channel, case queue, operating window, and scope of responsibility.

> A case is assigned according to its processing stage and submission channel. Once assigned, it must remain with that workstream until completion. A case must not be registered in multiple workstreams or receive duplicate Extension time.

1.1 Workstream Overview

No.	Independent workstream	Operating window	Dedicated staff	Handles only	Does not handle
1	**Standard Extension Resolution**	`T0–T+5h`; unresolved cases remain with this workstream	Rizki and Zijie	Technical issues resolved before `T+5h` that still require Extension verification, approval, platform update, or notification	Yandex `Extra Time` cases submitted after `T+5h`; on-site waiting cases after `T+6h`
2	**Yandex Extra Time Emergency Processing**	`T+5h–T+6h`	Roy Lee and DJ	Applications submitted through Yandex during the final hour with `Extra Time` as the title	Historical cases owned by Workstream 1; on-site waiting management after `T+6h`
3	**Post-Competition On-Site Waiting Management**	From `T+6h` until the waiting list is cleared	Yova and the on-site Jury	Participants who have not received approval by the normal end time and remain at their original seats with their signs raised	Cases already approved; participants who have left their seats and can no longer be verified on site

2. Workstream 1 — Standard Extension Resolution

2.1 Scope

1. Primary operating window: `T0–T+5h`.
2. This workstream handles technical issues that were resolved before `T+5h` but still require Extension verification, approval, platform update, or participant notification.
3. Any Workstream 1 case still open at `T+5h` remains with Rizki and Zijie until completion. It must not be transferred to Roy Lee, DJ, or Yova.

2.2 Staffing and Responsibilities

When a participant reports a technical or administrative issue:

1. The volunteer must record the issue opening time (OPEN) and brief description before taking any action to investigate the issue. in Form 1 (Day2).
2. Once the issue has been resolved and the participant can resume normal work, the volunteer must record the issue closing time (CLOSE) promptly, in Form 2(Day 2)

Staff member	Role	Responsibilities
Zijie	Delay Verification Lead	Review exception records, confirm valid start and end times, and enter the recommended Extension duration
Rizki	Data, Approval, and Notification Lead	Maintain the master sheet, issue formal approval, update the competition platform, and notify the participant

2.3 Workstream Boundaries

1. Rizki and Zijie do not process new Yandex `Extra Time` applications submitted after `T+5h`.
2. Rizki and Zijie do not organize participants waiting at their seats after `T+6h`.
3. If a case has been approved but the participant has not yet been successfully notified, Zijie continues to own the case until notification is completed and the record is closed.

3. Workstream 2 — Yandex Extra Time Emergency Processing

3.1 Scope

1. Operating window: `T+5h–T+6h`.
2. This workstream handles applications submitted through Yandex during the final hour with `Extra Time` as the title.
3. Roy Lee and DJ must report by `T+4h45` and complete their handover so the workstream can begin immediately at `T+5h`.

3.2 Staffing and Responsibilities

Staff member	Role	Responsibilities
DJ	Extra Time Intake and Triage Lead	Continuously monitor Yandex, register applications, check the title and required fields, remove duplicates, prioritize cases by the participant's current end time, and send cases requiring verification to Roy Lee
Roy Lee	Extra Time Verification Lead	Verify the technical issue and affected period, contact on-site volunteers, complete missing start or end times, directly tell Yandax engineer to do the extension immediately.

Roy Lee and DJ should complete the check within 15 minutes. If any students have not been granted an extension before the contest ends, please join Workstream 3, and synchronize information with Yova. Also, confirm on the Yandax platform that every student has received a response.

3.3 Workstream Boundaries

1. Roy Lee and DJ process only `Extra Time` applications received through Yandex.
2. Roy Lee and DJ do not take over historical cases owned by Rizki and Zijie.
3. Duplicate submissions from the same participant must be consolidated into one Case ID and must not receive duplicate Extension time.
4. If a case is still unapproved at `T+6h` and the participant remains at the original seat, on-site management moves to Workstream 3. The original Case ID, evidence, and verification progress must be preserved.

3.4 Caution

In this part, contestants usually Missing Closing Time, a few of them are Missing Open Time. Please check the students' statement on Yandax about the extension.

4. Workstream 3 — Post-Competition On-Site Waiting Management

4.1 Scope

1. Start time: `T+6h`.
2. End condition: the on-site waiting list has been fully cleared.
3. This workstream handles participants who have not received approval by the normal competition end time and remain at their original seats with their signs raised as instructed.

4.2 Staffing and Responsibilities

Staff member or team	Role	Responsibilities
Yova	On-Site Closeout Lead	Organize and deploy on-site Jurys, create the seated waiting list, verify participants by area, maintain order, and track each case through verification, approval, and notification

4.3 On-Site Rules

1. A participant who has not received approval must remain at the original seat and raise the **Tech Support** Card.
2. Remaining at the seat means only that the case is awaiting review; it does not mean the Extension has been approved.
3. **Any additional Extension approved through on-site verification is no more than 30 minutes.** The reason is that if a constant has the longer extra time application, it should be submitted to the Yandax and solved by the Workstream 2. Please first check that these ones are actually not given the extension through Workstream 2 first.
4. Yova and the on-site volunteers coordinate and verify the waiting process but must not verbally promise a specific Extension.

4.4 Caution

In this part, contestants are usually Missing Open Time and Closing Time. Please check with the contestants on-site.

---

5. Coordination Between the Three Independent Workstreams

The three workstreams remain operationally independent. They use the same Case ID only to preserve case status and prevent duplication.

5.1 Case Routing Rules

No.	Situation	Assigned workstream
1	The technical issue was resolved before `T+5h` and is awaiting verification, approval, platform update, or notification	Workstream 1; Rizki and Zijie retain ownership
2	An `Extra Time` application is submitted through Yandex between `T+5h` and `T+6h`	Workstream 2; Roy Lee and DJ process the case
3	At `T+6h`, the case is still unapproved and the participant remains at the original seat with the sign raised	On-site management moves to Workstream 3; Yova organizes the response team
4	The Extension was formally approved before `T+6h`	The case does not enter Workstream 3; the participant follows the approved end time shown on the platform

5.2 Handover Rule at `T+6h`

Moving a case into Workstream 3 transfers only the responsibility for on-site waiting management. It does not create a new application, restart the delay clock, or grant automatic approval. The original Case ID, supporting evidence, and review status must be retained.

---

6. One-Line Responsibility Summary

1. **Workstream 1 closes out standard and historical Extension cases from the normal operating period.**
2. **Workstream 2 processes Yandex `Extra Time` applications submitted during the final hour.**
3. **Workstream 3 manages participants who remain at their original seats after the normal end time while awaiting approval.**
