IOAI2025 Technical Support Guideline August 6th

1. How to make a correct copy of the notebooks (e.g. baseline.ipynb):
   - Click the **Save** button on the top right corner (NOT the **Create Copy** button)
   - Rename and save the file in the /personal/ directory.
   - **This can effectively prevent any further technical issue involving "Post failed, please retry".**

2. SSH Connection Issue:
   - Delete all the content in the config file if connection fails.
   - Restart VSCode if the connection issue persists.

3. cuDNN error: Restart the node. It's not a system bug if the problem persists (try checking your code).

4. OOM (CUDA out of Memory / Free memory is less than… / Engine core initialization failed): Contestants are responsible to account for their own VRAM usage. If the aforementioned errors are raised, release the memory cache through restarting the node, restarting the kernel, or emptying the cache.
   Specifically, only do the checks above if the issues appear in the baseline. If the problem persists, ask for technical support. Jury are not obligated to answer related questions if your file isn't identical to the baseline.

5. Submission errors (click on the ⓘ for detailed logs):
   - "Error: Submission file not found" is not a technical issue. Try checking your own code. Possible reasons for the error include incorrect names when generating submission files and incorrect output paths.
   - "Fail to parse": The formatting of the output file is incorrect.
   - **Other errors (Especially very long Python errors)** Equivalent to a Runtime Error. Debug your code.
   - Ask for technical help if you cannot see any logs after clicking on the ⓘ.

6. “Post fail, please retry” on submission:
   - Do NOT import the notebook when submitting. Either use the *upload* method or *select from disk* method.
   - (If you have followed step 1, you should see your file under the /personal/ directory when choosing the *select from disk* method).
7. Submission is taking too long to run:
   - A submission running for <30 mins does not constitute a possible tech issue.
   - Ask for technical support if the submission took longer than 30 mins and is still running without timing out.
   - Ask for technical support if an rpc error is raised when you’re attempting to cancel the submission.

8. HuggingFace issues:
   - Jury are not responsible for any Huggingface-related problems.

Note:

- *The jury will not account for your questions if both the following conditions are met:*
  a) it falls into the categories above
  b) no “ask for technical help” is included in the solutions we provided.
- *File a clarification sheet if your question is task related.*
- *Ask for tech support if your question falls outside the categories mentioned in this document.*
