National Youth Artificial Intelligence Competition Jury Manual

> This manual applies to the National Youth Artificial Intelligence Competition (Track 3) and is intended for use by competition referees. As a general rule, this manual is revised once a year.

Version Information: July 2026 30, v 3

I. Competition Background

This competition is open to teenagers with a certain scientific foundation and artificial intelligence literacy, and focuses on examining the participants' interdisciplinary comprehensive practical ability to transform practical scientific problems into computable ones and solve them by applying artificial intelligence technologies.

Participants are required to have solid core competencies and elective foundations in disciplines such as mathematics, physics, chemistry, biology and information technology, as well as an in-depth understanding of the fundamentals of artificial intelligence disciplines including Machine Learning and Deep learning. At the application level, participants must be proficient in operating development tools such as Python and PyTorch, and independently complete software development tasks including data processing and analysis, model construction and training, result prediction and scheme optimization under the background of scientific tasks.

II. Competition Rules

2.1 Schedule

2.1.1 Online Test and Platform Familiarization

The online test and platform familiarization session are only intended for participants to get acquainted with the on-site computer environment and the evaluation system. **Staff will only provide online assistance for system operation-related issues, and will not answer any questions related to the contest problems.**

a. July 25/26, two sessions;

b. Duration: 2 hours;

c. The scores will not be included in the final ranking.

2.1.2 Venue Equipment Testing and Platform Familiarization

Equipment testing and platform familiarization are only intended for contestants to get acquainted with the on-machine environment and evaluation system, **and staff will only answer questions related to system operation, and will not answer any questions related to the contest problems.**

a. Afternoon of July 31;

b. Duration: 2 hours;

c. The scores will not be included in the final ranking.

2.1.3 Formal Challenge

For the rules regarding official challenges, please refer to **Sections 2.2 to 2.5**.

2.1.4 Referee Training

The referee training is mainly oriented at training referees to familiarize them with the computer operating environment, the evaluation system and the contingency plans for common issues.

a. All referees and volunteers are required to participate in the test on July 25 and complete the whole process of question submission.

b. July 25, following the players' online test.

2.2 Official Challenge Rules

1. Number of questions: 3 (for junior high school) / 4 (for senior high school);
2. Challenge Duration: 5 hours;
3. Each contestant shall complete the tasks independently, **and any form of communication or collaboration with others is prohibited**;
4. Participants must independently complete modeling and training **in the computer operating environment uniformly provided by the organizing committee,** and **it is strictly prohibited to use or access external resources beyond the specified scope.**

2.3 Computer Lab Environment

1. Programming Language: Python;
2. Development Environment: Jupyter Notebook;
3. Deep learning frameworks: PyTorch and other Machine Learning-related libraries;
4. Mirror version: Subject to the requirements of the question, you can use `! pip list` to view the installed libraries;

5. **Network Restrictions**: Only limited network access will be granted during the official challenge period. **Participants are strictly prohibited from downloading pre-trained models locally or on the cloud, installing new libraries via pip, or calling online AI services outside the competition platform.** Use of pre-installed resources on the platform and its built-in AI assistant is permitted, with a limit of 1024 tokens per single conversation and no restriction on the total number of rounds.

2.4 Stoppage Time Rules

1. If a player's match is interrupted due to equipment malfunction, **no extra time will be added if the issue is resolved within 10 minutes; if the interruption exceeds 10 minutes, extra time equivalent to the actual affected duration will be added.**
2. In the event of a full outage such as a global system failure:
    a. If the interruption lasts $\leq$ 3 hours, the challenge duration will be extended by the same length accordingly;
    b. Interruption duration $>$ 3 hours, and the central control and organizing committee shall formulate a new plan.
3. Stoppage time shall not be added in any of the following circumstances:
    a. Common error messages specified in the document;
    b. the player's own operational errors, code issues;
    c. Issues with the contestant's own device usage methods (such as parallel use of multiple tabs, direct submission after local training, etc.);
    d. Login failure caused by the player, such as incorrect password entry;
    e. There will be a delay in the judge for the last 30 minutes, which is a normal phenomenon, and the judge will fully run all notebooks submitted before the deadline.
4. All stoppage time additions shall be decided by Track 3 Organizing Committee, and the right of interpretation shall be vested in Track 3 Organizing Committee.

2.5 Scoring Calculation Rules

2.5.1 Raw Score for Individual Item

a. Each question usually consists of a training set (accessible to participants), a validation set (inaccessible to participants) and a test set (inaccessible to participants).

b. The scores on the validation set form Leaderboard A, which is used for real-time feedback and parameter tuning selection during the competition; the scores on the test set form Leaderboard B, which is used for the final calculation of the standard score, and the standardized scores are uniformly subject to Leaderboard B.

c. During the challenge, participants may only view their own scores, the Baseline scores, and the current highest score on the A-leaderboard among all participants, and are not allowed to view the scores and rankings of other participants.

d. Submission Scoring Rules: In case of multiple submissions, each participant is allowed to **manually select up to 2 successful submissions** as the evaluation entries for Leaderboard B. The scoring for Leaderboard B is always based on **2 submissions** as the benchmark. If a participant manually selects fewer than 2 submissions, the system will automatically supplement the remaining slots with the top-performing results from the A Leaderboard to ensure that a total of 2 submissions are included in the Leaderboard B evaluation.For each competition problem, the system will conduct Leaderboard B evaluation on these two submissions, and take the one **with the highest Leaderboard B score** as the final result of this competition problem.

2.5.2 Standard Score for Individual Item

Standard Score for Individual Item $Score_{\text{Norm}}$ The calculation rules are as follows: if the raw score is lower than the base line score or the item is left unanswered, the score will be directly recorded as 0:

$$Score_{\text{Norm}} = \text{Max}\left(\frac{Score_{\text{Submission}} - Score_{\text{baseline}}}{Score_{\text{Max}} - Score_{\text{baseline}}} \times 100, 0\right)$$

a. $Score_{\text{Submission}}$ is calculated in accordance with the scoring requirements of the question the raw score of a contestant for a single question;

b. $Score_{\text{baseline}}$ is the base line score clearly given by the base line solution for each question;

c. $Score_{\text{Max}} = \text{Max}\left(0.9 \times Score_{\text{Solution}}, Max_{\text{Submission}}\right)$, where $Score_{\text{Solution}}$ refers to the reference solution provided by the problem setter, $Max_{\text{Submission}}$ and it represents the highest raw score achieved by any contestant across the entire competition.

2.5.3 Total Score

a. The total score of a contestant is the sum of the standard scores of all individual questions, which is used for the calculation of final awards.

b. When the total scores of contestants are equal, the ranking shall be determined by comparing their standard scores of individual questions in descending order successively:

   i. High School Track The priority order of individual questions is: Question 4 → Question 3 → Question 2 → Question 1
   ii. The priority order of individual questions in the junior high school track is: Question 3 → Question 2 → Question 1

c. When the total scores of the contestants and the scores of each question are the same, the sorting will be carried out by comparing the running time of the submission scripts for each question of the individual in sequence:
   i. The priority order of individual questions in the high school division is: Question 4 → Question 3 → Question 2 → Question 1
   ii. The priority order of individual questions in the junior high school track is: Question 3 → Question 2 → Question 1

III. Referee Role Orientation and Responsibilities & Rights

3.1 Duties of Referees

1. Receive questions raised by contestants raising their hands, determine the category of the questions and provide standard responses;
2. Handle on-site matters such as equipment, accounts, networks, device replacement, etc. ;
3. For questions related to the exam content, guide the contestants to fill in the academic feedback form and submit it to the control center for review and judgment;
4. For issues that cannot be determined on the spot, take photos and send them to the referee work group for centralized processing by the central control;
5. Record all abnormal situations and their handling processes throughout the game for post-match review.

3.2 Actions Prohibited for Referees

1. **Do not provide solutions to the contest problems**: do not explain the problem meaning, do not explain the implication of scoring metrics, do not explain the principle of the baseline, do not evaluate the contestants' problem-solving ideas, and do not give hints on model structure or parameter tuning directions.
2. **No code debugging assistance**: Participants shall troubleshoot errors in their own code by themselves; referees may prompt them to consult documents or use AI assistants, but shall not troubleshoot on their behalf.

3. **Do not operate the player's equipment on their behalf**: do not restart nodes for them, do not submit entries for them, and do not edit their Notebook on their behalf.
4. **Do not disclose non-public information**: do not inform other contestants of the scores, and do not disclose the internal discussion content of the central control team.
5. **Do not decide on added time without authorization**: The added time shall be uniformly determined by the control center in accordance with the added time rules specified in this instruction. Any operation related to added time requires the referee to submit an application in the work group, and the added time can only be recorded after the control center gives explicit approval.

3.3 Referee Code of Conduct and Oath

1. **Referee Oath**: All referees shall solemnly pledge and fulfill the following oath before officiating: "We solemnly promise to participate in officiating with the spirit of honesty, trustworthiness, due diligence and sense of responsibility, strictly abide by the principle of fairness and impartiality, earnestly perform the duties of supervision and evaluation, eliminate the interference of personal interests, and jointly safeguard the academic credibility of the competition. "
2. **Mutual Respect and Communication**: All referees shall, during the course of officiating, maintain mutual respect and friendly communication with contestants, team instructors, staff members and volunteers, so as to jointly foster an open, inclusive and rational event atmosphere.
3. **Upholding Integrity and Rules**: Referees shall strictly abide by and uphold competition discipline, conscientiously perform their officiating duties, put an end to any form of fraud, favoritism or connivance, and resolutely safeguard the fairness of the competition.
4. **Strictly Fulfill Confidentiality Obligations**: Materials including the test questions, original datasets, reference answers and on-site venue footage of the competition are classified as core confidential information. Without the written permission of the Organizing Committee, referees are strictly prohibited from recording, forwarding, distributing or disseminating any internal materials in any form throughout the entire process.
5. **Professional Ethics and Safety Assurance**: Referees shall maintain a civilized, courteous, rigorous and realistic attitude in academic work and officiating. Any words or deeds that threaten, harass, discriminate against or harm others are strictly prohibited, and full efforts shall be made to protect the physical and mental safety of all participants in the competition venue.

6. **Accompanying Personnel and Conflict of Interest Avoidance**: Referees shall strictly restrict accompanying personnel of team instructors and contestants from entering the competition venue, and firmly prohibit such personnel from contacting contestants inside the venue or transmitting information to them in any form.
7. **Reporting of Violations and Implementation of Penalties**: Once serious violations such as contestants tampering with the environment, connecting to the network without authorization, attacking the evaluation system, carrying prohibited electronic devices, or attempting to modify datasets beyond authorized code permissions are found during inspections, referees shall immediately record the facts truthfully and report to the central control. In accordance with the final ruling of the central control and the organizing committee, referees shall cooperate in implementing penalty measures including warnings and disqualification from the competition but not limited to the above.

IV. Problem Attribution and Handling Methods

4.0 General Principles

The general principle is as follows: basic issues shall be resolved on the spot by the referees; complex issues shall be referred to the control center of the track organizing committee for resolution;

Whenever a participant asks a question on site, first determine which of the following categories it falls into:

Category	Judgment basis	Treatment method
Device/Account/Network	This device's hardware, network, login, etc.	Handle in accordance with on-site standard operating procedures, refer to Section 4.1
Question Content	Whether the problem statement, scoring metrics, baseline principles, and data labels are correct	Do not provide a direct response; follow the academic feedback form process, refer to Section 4.2
Platform Issues	competition the platform's own display, scheduling, queuing, backend exceptions, etc.	Provide guidance, take photos and send them to the group as appropriate, see Section 4.3 for details
Player Questions	the contestant's own code, operations, paths, formats, environment	It does not replace troubleshooting; refer to the documents or tables in Section 4.4

	configurations, etc.	
grey area	the ownership cannot be determined on the spot	Take a photo, post it in the group, do not respond, let the contestant continue, refer to Section 4.5

4.1 Equipment, Account and Network Related

Phenomenon	Referee Actions	Response narrative
Local device crash / blue screen / keyboard and mouse malfunction / display failure	**Switch to a spare device without changing the account;**Take photos of the device number, original seat number, new seat number and player information, and sync them to the referee group;	"We will arrange a backup device for the machine malfunction, and your account will remain unchanged. "
The login prompt indicates that the account or password is incorrect	Allow the contestant to re-enter the password for the first time; provide assistance only if the contestant still fails after 5 minutes. The process of assisting with login If it is found that the problem is caused by the contestant (e. g., incorrect password entry), then it will not be counted as added time.	"Please check your case settings and input method, then try again. If it still doesn't work after 5 minutes, I'll assist you with logging in. "
Need to change the account	No replacement during the competition	"No account changes will be allowed once the competition starts. Please return to the login page to confirm that your account is correct. "
Network outage	Contact Central Control Technical Support	"Coordination is already underway. Please do not close the browser and wait for notification. "
The player needs to leave the court	**Take a photo of the examinee's information,**	"I will record and deactivate your account and password here. Once you leave the venue, you will not be allowed to re-enter. "

	synchronize the photo to the referee group, and remind the platform to deactivate their account and password	
Plug in the built-in keyboard / mouse / USB flash drive	Not allowed, politely decline	"Per the rules, personal peripherals and USB flash drives are prohibited. If this unit malfunctions, we will replace it with a spare one. "

4.2 Topic Content Related

1. Such issues will not be answered directly, and the academic feedback form process shall be followed. **Queries related to the content of the questions are not included in the post-competition score review scope, and must be submitted via the academic feedback form during the competition**.

Error Content / Phenomenon	Response Narrative/Solution
The contestant said, "The problem requirements are unclear" and "The data labels are incorrect".	"This is an issue at the question description level. Please write down the question number, the problem and the basis on the academic feedback form, hand it to me when you finish, and I will submit it to the central control for research and judgment. Go on to do the following questions and don't wait here. "
The contestant has questions about the scoring criteria	"The scoring criteria shall be subject to the wording of the test question, and the judges will not interpret the meaning of the criteria. Please refer to the test question or fill in the academic feedback form. "
The contestant requests an explanation of the baseline	"The baseline is the minimum threshold promised in the problem statement, and the judges will not provide further explanation. If the problem statement is unclear, please fill out the academic feedback form. "
The contestant asked, "Is this problem even solvable? Does this make any sense? "	"This is an issue at the question design level, which is not within my scope to answer. I will submit it to the control center via the academic feedback form. "
Participants question whether there are issues with the dataset or labels	"Please write down the question number and the basis on the academic feedback form, and I will submit it to the control center for evaluation. "

2. **The academic feedback process is as follows:** Students are required to fill in the academic feedback form on site, the referee takes a photo of the form and sends it to the referee group, the control staff and the person in charge of proposition are responsible for conducting research and judgment, and write an electronic version of the feedback to the referee group. After receiving the reply, the referee writes it down on the academic feedback form on the spot with a pen and shows it to the player for checking as soon as possible.

2026 National Youth Artificial Intelligence Competition — Track 3

Final - Academic Feedback Form

Candidate's Name: _____ Examination Room Seat Number: _____

Platform Account: _____

Time of Submission:
Candidate's Question:
Reply Time:
Reply Content:

Note: For this challenge, only questions submitted to the Scientific Committee in written paper form will be accepted, and responses will be provided in writing.

4.3 Common Issues of the Platform

The following issues are platform-side display, scheduling or backend exceptions. The referee shall guide the contestant to perform harmless operations, and **take photos and send them to the group as appropriate**.

Error Content / Phenomenon	Cause	Response Narrative/Solution

The dataset is mounted but displayed as unmounted	The platform displays a delay, while the actual dataset has been successfully mounted.	"Just try running the Notebook directly. If it works, that means it's already connected, and it's just a display issue. I'll note down your account and the time. "
White screen / Page unresponsive	The browser's cache gets full after prolonged use	"Please close this incognito window and open a new one. Let me know if the issue persists. "
The node has been queued for more than 5 minutes after startup	In platform resource scheduling	"Platform resources are being scheduled. Please read the problem first or write a copy of the baseline. I'll help follow up if it's not ready within 30 minutes. "
Evaluation queue blocked / Task terminated abnormally	High I/O pressure on the judge or backend exception	"The judging machine is under heavy load right now, and your account has been recorded. Please proceed to solve the subsequent problems or optimize your solution, and do not keep clicking the submit button repeatedly. "
The platform is inaccessible due to backend network issues	Platform backend network fluctuation	"Coordination is in progress. Please wait patiently for 5–10 minutes and do not close the browser. "
Unable to select the dataset (still not visible after refreshing)	Dataset production may take time or cause display delays	"It takes time to create the dataset. Please refresh the page to check, and I will note down your account synchronously. "
Cannot find the AI assistant icon	Differences in browsers and screen layouts lead to different icon positions	"The AI assistant icon is located in the top-right or bottom-right corner of the Notebook. Please try refreshing the page or returning to the problem description page. "
AI assistant freezes and becomes unresponsive	Platform frontend exception	"Please close the chat window and reopen a new one. If the issue persists, I will note down your account and report it to the platform. "
submissions that have not finished running by the end of the contest	The judge is still in the queue	"The evaluation opportunity will wait for all notebooks submitted before the deadline, so just wait for the run to complete. For the scoring method, please refer to the relevant instructions. "
When a collective problem arises	such as large-scale congestion in the evaluation queue and platform backend failures	**inform the player immediately that "the issue is under investigation"**, and promptly synchronize the information to the central control, which will uniformly assess whether to

		add extra time and formulate the corresponding extra time plan.
Abnormal score upon submission (score was displayed previously, but becomes 0 after resubmission)	It may be an issue with the scoring file or the contestant themselves, which requires confirmation from the central control team.	"Please first confirm whether the format of the submitted document is consistent with the official required format, as many zero scores result from this issue. We are also conducting confirmation in the group simultaneously. "
`! cp` Intercepted due to read-only restriction on the dataset	The evaluation dataset has been configured with read-only access, and bypassing the read-only restriction constitutes intentional violation.	"The evaluation dataset has been configured with read-only permissions, **and bypassing the read-only restriction via code constitutes a violation**. "

4.4 Players' Own Issues

The following issues are attributed to the contestant's own code, operations, paths, formatting or environment configuration. The judges may remind the contestant to refer to the platform operation instructions, but shall not directly step in to solve the problem for them.

Error Content / Phenomenon	Cause	Response narrative
`NameError` / Undefined Variable	The PATH environment variable is not set correctly, or an undefined variable is referenced in the code	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
`RuntimeError`	Tensor dimension mismatch, inconsistent devices, model structure errors, etc.	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
`ValueError`	Tensor shape mismatch, inconsistent data types, and incorrect array dimensions	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
`TypeError`	Data type mismatch, incorrect function parameter type	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "

`IndexError` / `KeyError`	Index out of bounds or dictionary key does not exist	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
`AssertionError`	An assertion failure in the code usually indicates that the data format or value does not meet expectations	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
`invalid syntax` / `SyntaxError`	Code syntax errors, including mixed use of Chinese and English punctuation (such as full-width comma `，`)	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
loss not decreasing / loss being nan / product scale being too large	Training strategies or data processing issues	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
Tensor dimension mismatch / shape error	confusion among batch dimension, channel dimension, sequence dimension or target dimension	"It is recommended to paste this code and the error message to the AI assistant for troubleshooting. "
`ImportError` / `ModuleNotFoundError`	Attempting to import libraries that are not pre-installed in the environment	"Only pre-installed libraries are allowed in the competition environment, and no self-downloading or self-installation is permitted. "
`HTTP` Error / `Connection refused`	The contestant's Notebook attempts to download content from the Internet or access non-allowlist addresses	"External internet access is unavailable during the competition. Please use the dataset mount or existing resources in the /personal directory instead. "
Is it possible to pip install new libraries?	Only pre-installed libraries are allowed in the competition environment	"Not allowed. Only pre-installed libraries may be used in the competition environment. "
Is it possible to download and use pre-uninstalled libraries in Notebook?	The competition conditions do not permit	"No. The Python libraries in the competition environment have been pre-configured. "
Whether external pre-trained models / external APIs / internet access are allowed	The competition rules prohibit	"The competition rules prohibit the use of external pre-trained model weights, external large model APIs, and access to external networks. Please re-read the rules. "

Is it possible to use an internal pre-trained model?	Varies by problem; some are available during problem development but cannot be relied upon during submission and execution	"Please re-read the restrictions on model usage specified in the problem statement. The boundaries between the development phase and the submission phase are different. "
Failed to connect to the node via VS Code SSH	The Bohrium platform does not support SSH connections	"The Bohrium platform does not support SSH access to nodes. Please use Bohrium Notebook for editing, or write the code locally before copying it to the Notebook for submission. "
Submit directly after local training, CUDA kernel mismatch	The local environment is inconsistent with the Bohrium evaluation mirroring	"The results trained in the local environment cannot be directly deployed to the platform. Please copy the code to a new Notebook on Bohrium, rerun it with the mirroring specified in the problem statement, and then submit it. "
`FileNotFoundError` / Training set or test set not found	No competition topic registered, no dataset mounted, or the nodes are not mounted with the same dataset	"Please confirm three things: you have registered for this problem, the Notebook has mounted the dataset of this problem, and the current node has also mounted the same dataset. If it still cannot be seen after mounting, it is a display issue, just run the Notebook once directly. "
Mounted my own dataset but cannot access it within the node	This dataset was not checked when the node was created; the mounting will not take effect after the node is started.	"Mounting is a node-level behavior. You must check this dataset when creating a node. Please delete the current node, recreate it and check the option. "
`Machine type does not exist`	The competition ID was entered incorrectly upon submission	"Please click the 'Submit' button on the competition interface to enter the submission window; do not manually enter the URL. "
Error occurred during self-node training, which was resolved after switching to the baseline replica	The player node does not use the mirroring specified in the problem statement, resulting in inconsistent environments	"Please copy the code to a new Notebook using the mirroring specified in the problem statement, and submit it after you run it successfully. "

baseline fails to run / dimension error reported during training	The mirroring selected when starting the node does not match the requirements specified in the problem statement.	"Please re-read the requirement for mirroring in the first line of the question, and follow the instructions given in the question. "
Unable to attach dataset / Dataset list not visible	Have not completed the registration for this contest problem	"Please first complete the registration for this contest problem on the competition interface. You can only access the corresponding dataset after successful registration. "
`Post failed, please retry` / 发布失败，请重新提交	① The file name contains invalid characters such as line breaks or commas; ② Extra datasets are mounted upon submission; ③ Instead of clicking the "Submit" button, the user manually entered the URL	"Please troubleshoot step by step in accordance with the platform's operation instructions. If the error persists, create a new baseline copy, paste the code into it, and resubmit it once. "
Notebook copy name with line breaks / commas causes submission failure	The replica name contains invalid characters	"The name of the copy can only contain English periods, underscores, hyphens and half-width colons, and cannot start with a special character or a number. Please rename it and submit again. "
`CUDA error` / `OOM` / insufficient video memory	Multiple Notebooks or multiple tabs connecting to the same node simultaneously leads to insufficient video memory; or the amount of training data in a single run is excessively large	"Please close other Notebooks and tabs first, refer to the platform documentation to clear the video memory. If the problem persists, restart the node. "
`IOPub data rate exceeded`	The single output content of the Notebook is too large, so Jupyter actively terminates the data transmission	"The output per operation is too large. Please reduce the amount of data printed at one time, or output in batches. "
Notebook fails to execute / No response after clicking	Open from the "File" panel on the left instead of the Notebook button	"Please open it via the Notebook button in the left sidebar, do not open it directly from the file panel. Notebooks opened from the file panel cannot be executed. "

Notebook crashes before saving / incomplete metadata	The Notebook was abnormally interrupted before saving, and the metadata was not completely written	"Please try saving and refreshing, or log out and then log back in. If the issue persists, create a new baseline copy and rewrite it. "
Opening the same Notebook in multiple tabs causes version conflicts	Editing the same file in multiple tabs leads to overwriting	"Please only edit the Notebook in one tab. Save a new copy before each major revision, and do not edit synchronously across multiple tabs. "
Notebook size exceeds 100 MB	The Notebook contains a large amount of output content	"Clean up large outputs before saving: Kernel → Restart & Clear Output. "
Want to save the Notebook to /personal	This function is not supported	"This function is not required. Please use the Notebook management within the Bohrium platform. "
Can multiple Notebooks be run simultaneously?	Platform not supported	"Please keep only one Notebook window open for coding and training. Running multiple Notebooks simultaneously will cause system conflicts. "
Some contest problems indicate that "only one Notebook is allowed to be submitted"	Your submission still has your own dataset or. pth files mounted	"Only one Notebook submission is allowed for this task. Please remove all mounted datasets from the top-right corner before submitting. "
Incorrect format of the submitted file (e. g. header, number of rows, number of columns, file name within the zip package, etc.)	The contestant did not output in the submission format required by the problem statement.	"Please re-read the requirements for the submission format in the problem statement, and check the file name, header and number of lines item by item. "
Zero points will be awarded if the number of submitted rows does not match the official sample size.	The number of lines in the submitted file does not match the test set	"Please confirm whether the number of lines in the submitted document is consistent with the sample size officially announced. "
Slowdown / queuing on the judge in the last 30 minutes	A large number of contestants submit entries centrally, resulting in heavy system I/O pressure	"This is a known phenomenon. Please plan your time in advance and avoid cramming all critical submissions at the last minute. "
Can I ask questions in the Bohrium discussion	The discussion section is only for posting official	"Only official announcements are allowed in the discussion area. For player

forum?	announcements	inquiries, please use the academic feedback form or raise your hand to refer to the referee. "
How to select submission for Leaderboard B	The document already contains relevant instructions	"You may manually select up to 2 successfully submitted attempts, and the higher score will be taken as your final result. If you make no selection, the system will automatically pick your highest score from Leaderboard A. This has been specified in Chapter 6 of the document. "
How to renew when the token of AI assistant exceeds 1024	1024 is the per-request limit	"1024 is the limit for a single conversation; you can start a new round of conversation, and there is no limit on the total number of rounds. "

4.5 Gray Area

When the attribution of an error report cannot be easily determined, the following actions shall be implemented uniformly:

1. **No response**. No explanation, no guidance, no conclusion.
2. **Take a photo**. Capture the Three-factor Verification including the screen, error stack, and player's seat number, then send it to the central control work group.
3. **Replied to the contestant**: "We have taken photos and sent them to the work group for the control team to assess. You can proceed with the subsequent tasks first instead of waiting here. "
4. **After the control center issues the receipt**, the examination hall supervisor will take a photo and send it back to the contestant.
5. If the central control fails to give a receipt for the same issue within 30 minutes, follow up once again.

Applicable Scenarios:

1. The attribution of the error report falls between "platform issue" and "contestant issue", so it cannot be determined on the spot.
2. It involves both the problem description and the platform behavior (e. g., "the problem states mirroring v1.1, but the platform only allows selecting v1").

3. The player was so emotional as to demand an immediate response, and the referee was unable to make an immediate ruling on the case.
4. **Collective issue: if the same phenomenon is reported by 3 or more people, this process shall be followed regardless of whether the cause is clear**.
5. The participant has already filled out the academic feedback form but keeps repeatedly asking questions about the same test item.

Stoppage time: No stoppage time will be added if the control center gives a feedback within 10 minutes; if it exceeds 10 minutes, the control center shall be responsible for making the judgment.

4.6 Violation Identification and Reporting

The following acts constitute serious violations. Once discovered by the referees, they shall be recorded immediately and reported to the control center:

1. Tampering with environmental or system configurations;
2. Unauthorized use of external network resources (e. g. `! wget` , `! pip install` , calling external APIs);
3. Attack Evaluation System;
4. communicate or collaborate with the outside world;
5. Carrying prohibited electronic devices (such as mobile phones, USB flash drives, etc.);
6. Obtain or attempt to obtain test data;
7. Bypassing the read-only restriction of the dataset via code (e. g., using `! cp` to modify the dataset on the evaluation side).

> All evaluation datasets have been configured with read-only permissions. Any act of bypassing the read-only restriction via code to modify the datasets shall be deemed as intentional violation.

8. Any other act that undermines fairness.

Violation handling shall be implemented after the ruling by the control center and the organizing committee. If a participant has committed a violation, they will be disqualified from the competition, and relevant liabilities will be pursued depending on the severity of the circumstances.
